

MSDS - Material Safety Data Sheet

Product name:	“Bishofit” (Magnesium Chloride water solution)	
Importer's name:	Medicina UK ltd, London	
Importer's address:	PO Box 54797, The Hyde, NW9 1GA	
Product composition:	Natural mineral bishofit (Magnesium Chloride)	- 49%
	Water	- 51%
Hazardous ingredients:	None	
Use:	External use only	
Product toxicity:	Non-toxic. However, if swallowed, it can cause diarrhoea due to the laxative properties of magnesium chloride.	
Solution stability:	Indefinite	
Flammability:	Non-flammable	
Explosion data:	Non-explosive	
Radioactivity:	Non-radioactive	
Skin irritation factor:	Non-irritating	
Sensitizing factor:	Non-sensitizing	
Contra-indications:	Individual sensitivity to the product, diseases in the acute stage, skin disorders (avoid affected areas), bromism, iodism, general contra-indications to balneotherapy.	
Cautions:	Daily applications of compresses on the same part of the body can cause skin irritation. For this reason, always wash the skin off any product residue before applying a new compress. In cases of skin sensitivity, “Bishofit” can be diluted with water to suit the skin type. This also applies to children. For baths, use half of the recommended amount for adults. Do not apply compresses to more than 2-3 large joints at a time. If suffering from cardiac problems apply only one compress for 6-7 hours.	
increased		
Storage instructions:	Store in temperatures between -10 - +20°C, away from children.	
Additional data:	Being a highly concentrated magnesium salt solution, “Bishofit” is a natural preservative with an unlimited shelf life.	
Environmental data:	The product is not dangerous to the environment and does not form any toxic or dangerous substances during production, use, storage or transportation. No special disposal measures required.
